

As a commercial driver, I depend on XM radio for information that I cannot get on AM or FM radio. I drive between Los Angeles CA. and Seattle WA. When I am a 100 or so miles from my destination I listen to XM road report so I can get to where I need to be without getting stuck in traffic due to rush hour traffic accident and so forth. The last thing a state patrol needs is hundreds of trucks fighting for a lane with small cars and causing a bigger traffic jam than there needs to be. XM radio helps commercial drivers like myself, avoid these areas, thus reducing problems. Regular radio does not let me know whats going on in a given area when I am a 100 miles out, but XM radio does. I truly need this service as a tool to better serve my customers and to help keep out of areas that I am advised to avoid. PLEASE donnot limit XM radio's service. This is a tool that ALL commercial drivers need to better serve our customers and help keep us out of areas of heavy traffic.
